

## LPC Lateral Packing Conveyor

The Lateral Packing Conveyor (LPG) can be used to transport stamped cartons from your SSM Synchronized Stamp Machine or VL-1 o Tax Stamp Machine to a designated packing area using the LPG's moving belt. Because of this, the Lateral Packing Conveyor can turn your stamping facility into a one-person operation all while increasing productivity. The LPG also communicates directly with your VL-1 Oor SSM Tax Stamping Machine stopping the stamper if cartons are backed up.

## Large Flap Carton Printer

Our large flap printer is a reliable, low cost inkjet system adapted to our stamping equipment for marking and coding cartons. It offers highly reliable thermal jet technology, high-resolution printing, and easy-to-change ink cartridge. An internal detection system provides the user with "ink low" and "ink out" status of ink cartridges. Lift the hinged cover of the print head to find a disposable ink cartridge that is simple to snap-in and snap-out for easy ink replacement.
